

Display Cabinet Remanufacture

Despite modern manufacturing improvements the environmental effect of cabinet disposable at end of life is still an issue for the refrigeration industry.

Our close attention to design detail, engineering knowledge & flexible production facilities give us the ability to provide remanufactured products that incorporate all the beneficial features, technology & performance of a new cabinet. That old display case that was destined for scrap could be re-manufactured to look and behave like the latest model, saving the environment and you money.

Product Innovation

Product Hot-Spots occur when, with the night-blind is down and the cooler, more dense air escapes towards the bottom of the blind, drawing in warmer ambient air at the top. The velocity of this warmer air is fast enough to cut straight through the cabinet air curtain, causing product temperatures to rise dramatically. The Patented FSx blind, developed by RJM and produced and sold by Thermasolutions, manages the ingress of the warmer, ambient air into the cabinet.

With the demand for better product presentation in refrigerated cabinets, RJM have developed the vertical merchandising shelf. With adjustable inserts to suit a variety of products, the shelf offers clear presentation whilst maintaining product temperatures and cabinet performance. Many of the alternative solutions create insulative barriers around the product resulting in product degradation and reduced shelf life.

Bespoke Cabinet Design

At RJM, we understand that not all of your refrigerated display case requirements are available, off the shelf, and our experienced cabinet design team are on hand to

turn your vision into reality. Whether you are looking for a promotional display for your products, maximising merchandising space or just looking for something to fit into an unusual space, we can work with you to provide the best solution. Our in house design team can put together concept visuals or provide full size mock ups to ensure that you are confident that the end result will be exactly what you are after. Cabinet performance can be backed up in our own EN29352 test laboratory where everything is tested in detail to ensure

product quality and safety is maintained throughout its entire shelf life. Our choice of manufacturing partners also means that we can offer the most cost effective production to suit required volumes and price while our experienced installation teams mean that the quality does not stop until you are completely happy on site.

We can provide a one stop shop to all of your specialist refrigerated display cabinet requirements.
